Reproducible Documents with {rmarkdown}

Some general tips and good practice

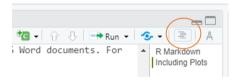

Instructor: Selina Baldauf

Freie Universität Berlin - Theoretical Ecology

Tip 1: Keep your document clean

- .Rmd documents can quickly become large and messy. To keep them clean, you can
 - Use headers to mark sections in your document
 - Navigate the file using the document outline

- Use names for your code chunks
- Navigate code chunks with the code and document outline (bottom left of script)

Tip 2: Source large data preparation scripts

- Related to Tip 1
- If it's not necessary for the document, do data preparation in a separate R Script
- Place that R Script in the project where the .Rmd is located
- Then source the script in a code chunk:

```
```{r prepare-data, warning=TRUE, message=TRUE}
source("path/to/script.R")
```

• This runs all the R code in script.R and loads the results into the .Rmd document

## Tip 3: Split larger documents into multiple . Rmd files

- Related to Tip 1
- Write separate .Rmd files e.g. for Introduction, Methods and Results
- Have on main . Rmd file that
  - Combines the sections into one
  - Controls YAML options of the output
- You can load an .Rmd file into another one using the child chunk option

```
```{r load-child, child="path/to/child.Rmd"}
```

Tip 3: Split larger documents into multiple . Rmd files

- 3 separate files Introduction.Rmd, Methods.Rmd, Results.Rmd
- The separate files control everything that happens on the lower levels of the documents, e.g.

```
## First results
   ```{r result-plot, fig.width=3}
plot(1:10, 1:10)
   ````
```

- Main.Rmd (see right) controls
 - YAML options
 - Global setup options
 - Includes the sections via the child option

```
title: "My paper"
author: "Selina Baldauf"
output:
 pdf document:
    toc: true
```{r global-setup, include = FALSE}
knitr::opts chunk$set(echo = FALSE)
Introduction
```{r intro, child="Introduction.Rmd"}
# Methods
   {r methods, child="Methods.Rmd"}
# Results
```{r results, child="Results.Rmd"}
```

## Tip 4: Read through some online resources

- Read or scroll through some R Markdown books or tutorials to
  - See what is possible with R Markdown
  - Find thing that are relevant for your own documents
- I recommend to start with the two books:
  - R Markdown Cookbook
  - R Markdown The Definitve Guide
- You can also find some resources on the workshop website
